

ABSTRACT

The rise of digital communication and the spread of the internet has made an enormous impact in every industry. One such domain is the Hiring process, where a job seeker applies to a job by creating a profile on a job portal by providing all his/her work preferences. These work preferences of each user can be collected from each user and provide job recommendations based on their preference. There had been work done in this field, where researchers have implemented Recsys using the Hybrid filtering method as user data had previous interaction with item. This article presents a recommender system that aims to help job seekers to find suitable jobs. First, job offers are collected from job search websites then they are prepared to extract meaningful attributes such as job titles and technical skills. Job offers with common features are grouped into clusters. As job seeker like one job belonging to a cluster, he will probably find other jobs in that cluster that he will like as well. A list of top n recommendations is suggested after matching data from job clusters and job seeker behaviour, which consists on user interactions such as applications, likes and rating.

CHAPTER 1

INTRODUCTION

1.1 PROJECT OVERVIEW:

In today's world, recommendation systems are used to solve the problem of information overload in many areas allowing users to focus on important information based on their interests. One of the areas where such systems can play a major role is in helping students achieve their career goals by generating personalized job and skill recommendations. At present, there are many job posting websites providing a huge amount of information and students need to spend hours to find jobs that match their interests. At the same time, existing job recommendation systems only consider the user's field of interest, but do not take into consideration the user's profile and skills, which can generate more relevant career recommendations for users.

The Internet-based recruiting platforms become a primary recruitment channel in most companies. While such platforms decrease the recruitment time and advertisement cost, they suffer from an inappropriateness of traditional information retrieval techniques like the Boolean search methods. Consequently, a vast amount of candidates missed the opportunity of recruiting. The recommender system technology aims to help users in finding items that match their personnel interests; it has a successful usage in e-commerce applications to deal with problems related to information overload efficiently. In order to improve the e-recruiting functionality, many recommender system approaches have been proposed. This article will present a survey of e-recruiting process and existing recommendation approaches for building personalized recommender systems for candidates/job matching.

From the start of the commercialization of the internet in the late 1980s, the question was raised of how this technology could be leveraged in employee recruitment to enhance job seeker - vacancy matching.

1.2 PURPOSE:

Job recommendation is also dynamic and must adapt to the changing requirements of the end user. Jobs usually come with the criteria of suitability mentioned in job description that a candidate is supposed to satisfy. Some jobs are particular about the criteria while others are not, which might depend on attributes like company and designation. Certain features like skills and designations that have high dimensionality must be meticulously represented for algorithms to use them efficiently.

The match between candidates and jobs involves a complex amalgamation of the attributes of candidates and jobs. The intent is to identify the patterns in the data for recommending relevant jobs to candidates. The prediction of jobs for a candidate is based on information derived from the data about candidates applying for jobs on a web portal. A rule-based recommender system might not be an ideal solution as it is bound to miss cases, especially the nuances that humans cannot comprehend.

CHAPTER 2

LITERATURE SURVEY

2.1 EXISTING PROBLEMS:

The problem of job search and job recommendation is little different from a general information retrieval/recommendation task. Job seekers frequently use ‘general-purpose’ search engines and online social networks to search for jobs. Previous surveys on job recommender systems, which consider JRS contributions before 2012, include the latter survey which is very limited in scope. There are many recommendation system that asks for premium access to get advanced features. Recommender systems are being broadly accepted in various applications to suggest product services and information items to latent customers. But recently, many e-commerce applications join recommender systems in order to expand those customer services, increase the selling rates and decrease customers search time.

2.3 PROBLEM STATEMENT DEFINITION

I am a Fresher. I am trying to find a job but it is very difficult to search by going to each company because it consumes more amount and time to search the company and provide the resumes in person which makes me feel frustrated when I am not getting proper information about the skills required and the job that is offered.

CHAPTER 3

IDEATION AND PROPOSED SOLUTION

3.1 EMPATHY MAP CANVAS:

3.2 IDEATION AND BRAINSTORMING:

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Template

Conducting a brainstorm

Executing a brainstorm isn't unique; holding a productive brainstorm is. Great brainstorms are ones that set the stage for fresh and generative thinking through simple guidelines and an open and collaborative environment. Use this when you're just kicking-off a new project and want to hit the ground running with big ideas that will move your team forward.

 15 minutes to prepare
 30-60 minutes to collaborate
 3-8 people recommended

 Meta  Meta

 Share template feedback

 **Before you collaborate**

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

 15 minutes

A Choose your best "How Might We" Questions
Create 5 HMW statements before the activity to propose them to the team.

B Set the stage for creativity and inclusivity
Go over the brainstorming rules and keep them in front of your team while brainstorming to encourage collaboration, optimism, and creativity.

1. **Encourage wild ideas** (If none of the ideas sound a bit ridiculous, then you are filtering yourself too much.)
2. **Defer judgement** (This can be as direct as harsh words or as subtle as a condescending tone or talking over one another.)
3. **Build on the ideas of others** ("I want to build on that idea" or the use of "yes, and...")
4. **Stay focused on the topic at hand**
5. **Have one conversation at a time**
6. **Be visual** (Draw and/or upload to show ideas, whenever possible.)
7. **Go for quantity**

C Interested in learning more?
Check out the Meta Think Kit website for additional tools and resources to help your team collaborate, innovate and move ideas forward with confidence.

→

Step-2:Brainstorm,IdeaListingandGrouping

2

Brainstorm

To recommend a job, we calculate similarity of skill keywords between sample resume and job description. Once job offers and profiles are filtered, the second step is text preprocessing. The third step, feature representation, aims to represent these documents (job offers and profiles) as vector space models

10 minutes

Nivedha

Aruna

Nisha

Person 5

Person 6

Person 7

Person 8

3

Group Ideas

Thus, the contributions of this work are threefold, we made publicly available a new dataset formed by a set of job seekers profiles and a set of job vacancies collected from different job search engine sites; i put forward the proposal of a framework for job recommendation based on professional skills of job seekers; and carried out an evaluation to quantify empirically the recommendation abilities of [feature-based](#) methods, considering different configurations,

Tip

You can use the [Writing Assistant](#) to generate 10 ideas on the strongest ideas.

Step-3:IdeaPrioritization

4

Prioritize

- 1.Return percent match by job type.
- 2.Return a chart of where your resume fits in with the other job positions based on topic matches.

🕒 5 minutes

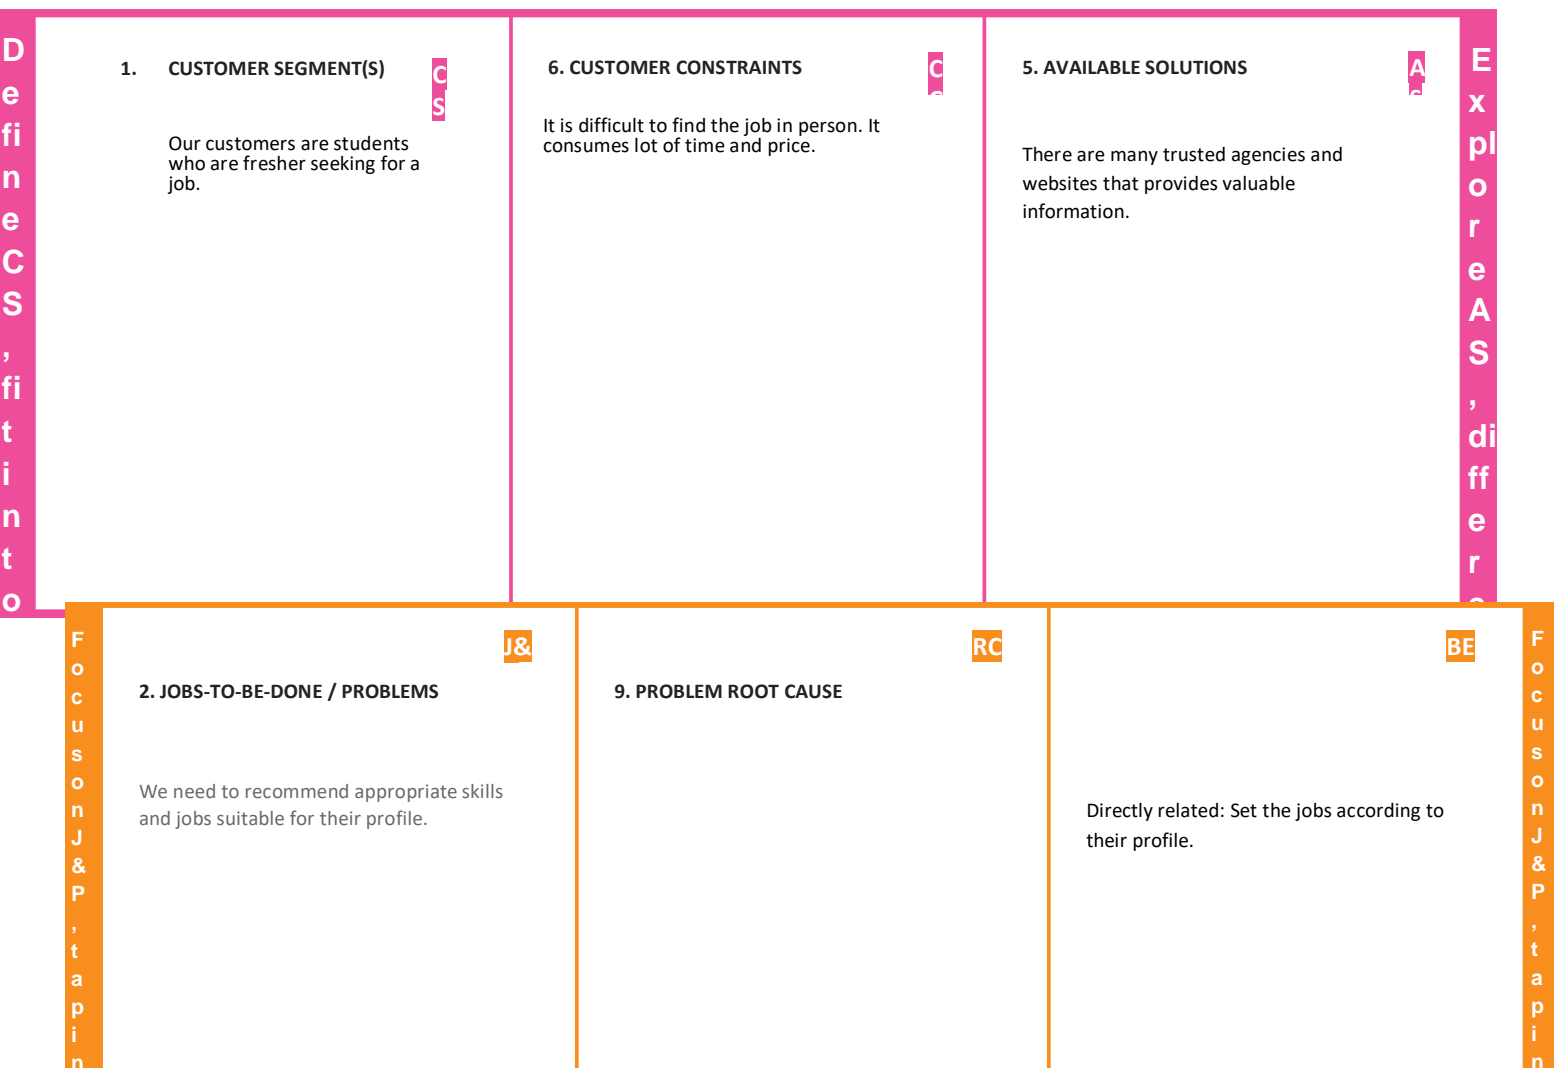

3.3 PROPOSED SOLUTION

Table: 3.3.1 Proposed Solution

S. No	Parameter	Description
1.	Problem Statement (Problem to be solved)	To give job and skill recommendations to the fresher at his place without waste of time and money, who is searching for a job.
2.	Idea / Solution description	To recommend a job, we calculate similarity of skill keywords between sample resume and job description. Once job offers and profiles are filtered, the second step is text preprocessing. The third step, feature representation, aims to represent these documents (job offers and profiles) as vector space models
3.	Novelty / Uniqueness	Feature selection technique helps to reduce the irrelevant and redundant data without affecting the accuracy of the prediction model.
4.	Social Impact / Customer Satisfaction	By recommending jobs that suits their profile they feel satisfied and happy.
5.	Business Model (Revenue Model)	Candidates can get job from their own place without going from company to company in search of jobs.
6.	Scalability of the Solution	This gives better solution to the job seeking fresher and also recommend skills that they require.

3.4 PROBLEM SOLUTION FIT

	<p>3. TRIGGERS</p> <p>Customers are triggered by hearing information through their Friends and advertisements.</p>	<p>10. YOUR SOLUTION</p> <p>Build a website for the job seeker which enables them to find a job suitable for them.</p>	<p>8. CHANNELS of BEHAVIOUR</p> <p>ONLINE:</p> <p>The jobs and skills are recommended based on their profile and are stored in the DB.</p>	<p>Identif y song TR & EM</p>
	<p>4. EMOTIONS: BEFORE / AFTER</p> <p>Frustrated,inferior,depressed,difficult to socialize ,dissatisfaction</p> <p>→ happy, satisfied.</p>			

CHAPTER 4

REQUIREMENT ANALYSIS

4.1 FUNCTIONAL REQUIREMENT:

Table: 4.1.1 Functional Requirement

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Profile Creation	Add preferences Upload profile picture Upload resume
FR-4	Jobs Recommendation	Apply for the jobs via links provided
FR-5	Suggestions	Feedbacks Ratings
FR-6	Logout	Confirmation via alert message

4.2 NON-FUNCTIONAL REQUIREMENTS:

Table:4.2.1 Non-Functional Requirements

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	In order to make personalized recommendations corresponding to the user preferences, recommendation systems collect ratings of service by user and build user profiles depending on how the data was collected.
NFR-2	Security	All Personal Identifiable data and files on server will be always encrypted. All documents generated should be password protected, display error message in case of the wrong password with the date it was set and a hint of standard documents – like ‘ this is the same password as all your other documents’
NFR-3	Reliability	We do not add sensitive data openly to request payload and won’t share the data to any third party applications. Any irrelevant ads won’t be recommended.
NFR-4	Performance	Modular UI architecture(responsive and time efficient). Load data fast. Separate content from navigation.
NFR-5	Availability	Available online. In offline only applied jobs and profile can be viewed. Supports in all platforms.
NFR-6	Scalability	It can handle a large increase in users, workload or transactions without undue strain.

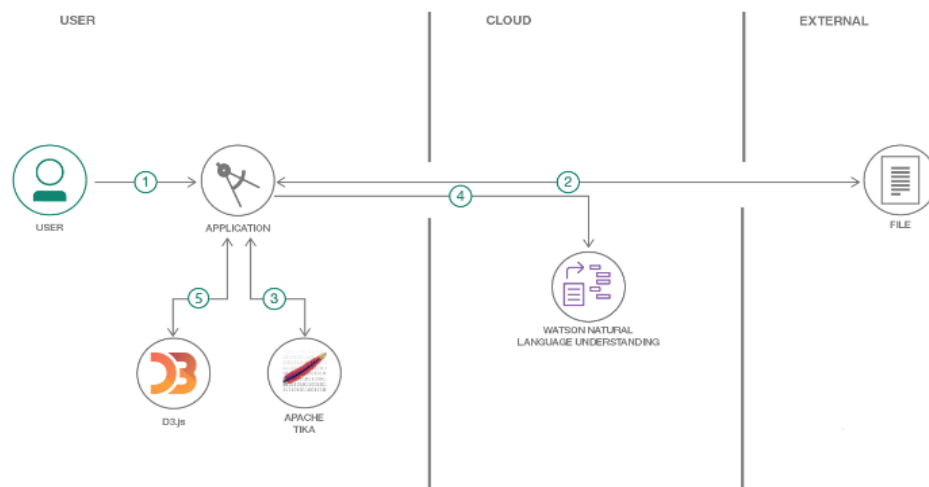

CHAPTER 5

PROJECT DESIGN

5.1 DATAFLOW DIAGRAMS:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information and where data is stored.

Flow

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

Figure:5.1.1 Dataflow Diagram

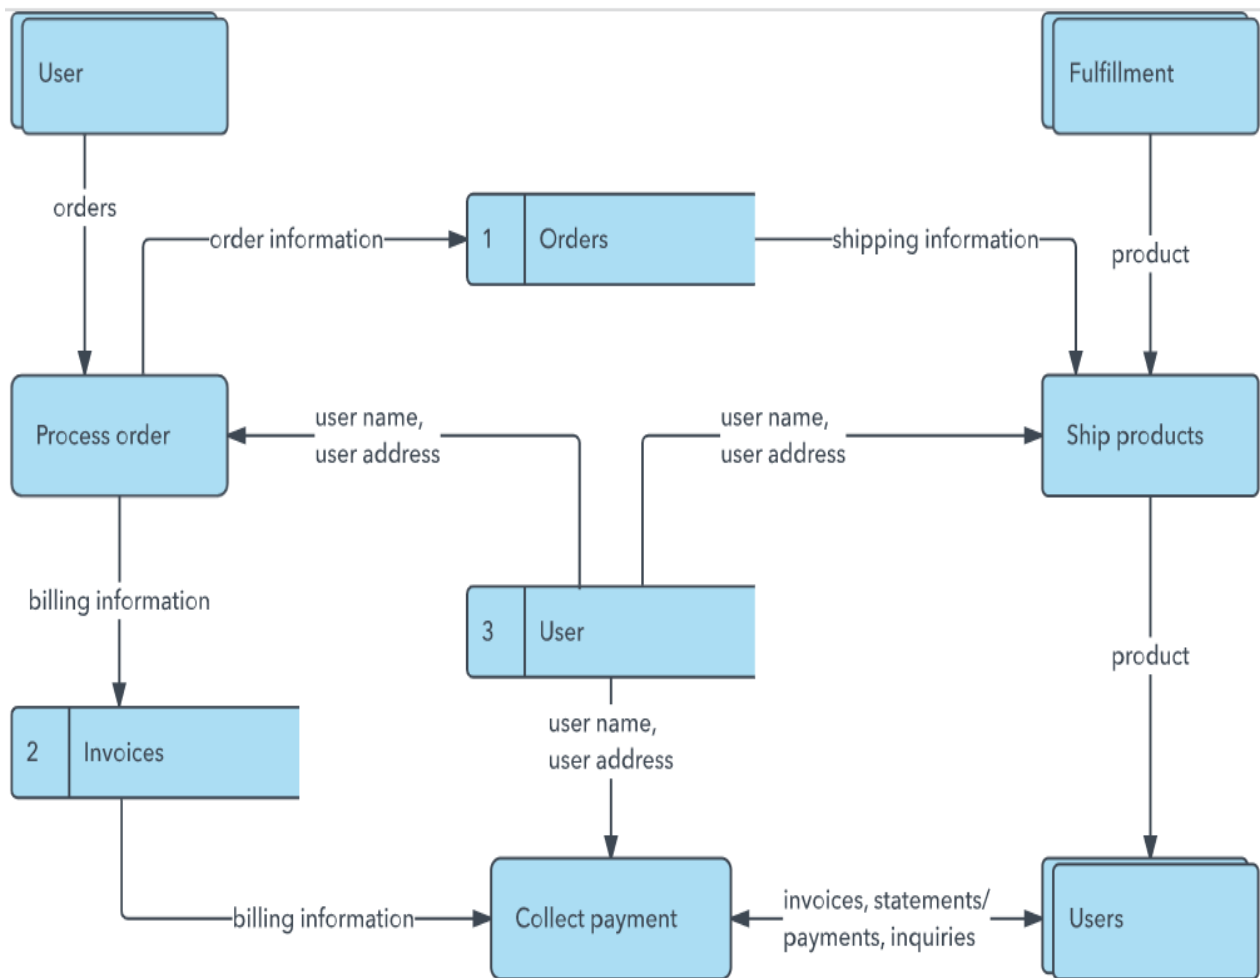

Figure:5.1.2 Data Flow Diagram (cont)

5.2 SOLUTION AND TECHNICAL ARCHITECTURE:

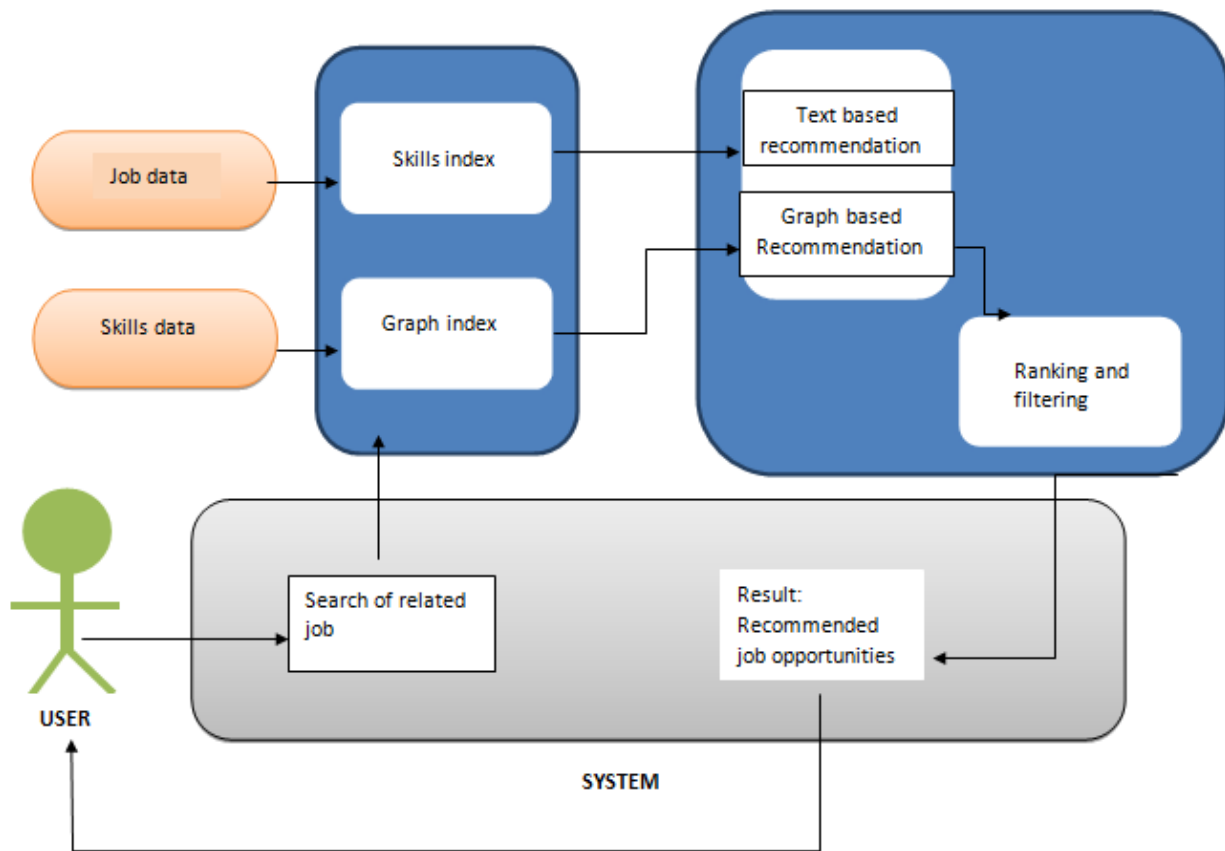

Figure: 5.2.1 Solution Architecture

Figure 5.2.2: Technology Stack

Table: 5.2.1 Components and Technologies

S.No	Component	Description	Technology
1.	User Interface	Web Interface	HTML,CSS,Javascript.
2.	Application Logic-1	Prediction model	Python
3.	Application Logic-2	Extract data	IBM Watson Assistant
4.	Database	Data Type-Dialog query	MySQL, NoSQL, etc.
5.	Cloud Database	Database Service on Cloud	IBM DB2
6.	File Storage	For storing user data	IBM Block Storage or Local Filesystem
7.	Infrastructure (Server / Cloud)	Cloud Server Configuration : Deploying the web interface using flask	Python flask.

Table:5.2.2 Application Characteristics

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	IBM Watson	IBM Watson
2.	Security Implementations	IBM Cloud	ISO,SOC2,US HIPAA,Encrypted file and storage system
3.	Scalable Architecture	Web Interface Architecture:Intent,Entities,Dataflow,Scripts	IBM Watson Assistant
4.	Availability	Load balancers,distributed Servers	IBM Watson Assistant
5.	Performance	IBM Watson -Automated processs	IBM Watson

5.3 USER STORIES:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
		USN-4	As a user, I can register for the application through Gmail		Medium	Sprint-1
	Login	USN-5	As a user, I can log into the application by entering email & password		High	Sprint-1
	Dashboard					
Customer (Web user)	Dashboard	USN-6	As a user, I can enter the queries related to the job recommendation I need	Entering skills and asking queries	High	Sprint-1
Customer Care Executive	Dashboard	USN-7	Customer care executive, clears doubts and adds recommendation	Data input for recommendation system	High	Sprint-1
Administrator	Login	USN-8	Administrator logs in to the system to make changes			
	Dashboard	USN-9	Additional information and managing job queries	Administration of the whole system	High	Sprint-1

CHAPTER 6

PROJECT PLANNING AND SCHEDULING

6.1 SPRINT DELIVERY SCHEDULE

Table: 6.1 Sprint Delivery Schedule

Sprint Delivery planning:

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Nivedha
Sprint-1		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Priyadharshini
Sprint-2		USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Nisha
Sprint-1		USN-4	As a user, I can register for the application through Gmail	I can receive confirmation email & click confirm	Medium	Aruna
Sprint-1	Login	USN-5	As a user, I can log into the application by entering email & password	I can access my account / dashboard	High	Nivedha
Sprint-1	Dashboard	USN-6	Create a model set that contains those models, then assign it to a role.	Assign that group to the appropriate roles on the Roles page	High	Priyadharshini
Sprint-1	Identity-Aware	USN-7	Open, public access, User-authenticated access, Employee-restricted access.	Company public website. App running on the company intranet. App with access to customer private information.	High	Nisha
Sprint-1	Communication	USN-8	A customer care executive is a professional responsible for communicating the how's and why's regarding service expectations within a company.	For how to tackle customer queries.	Medium	Aruna
Sprint-1	Device management	USN-9	You can Delete/Disable/Enable devices in Azure Active Directory but you cannot	Ease of use.	Medium	Nivedha, Priyadharshini

Table:6.2 Sprint Delivery Schedule (Cont)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	17 Nov 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	17 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	17 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	17 Nov 2022

Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.

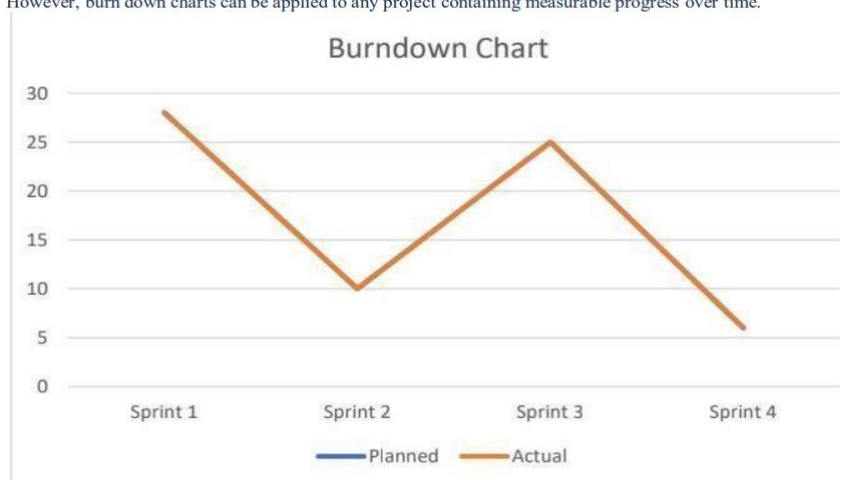

Figure: 6.1 Burndown Chart

SCREENSHOTS :

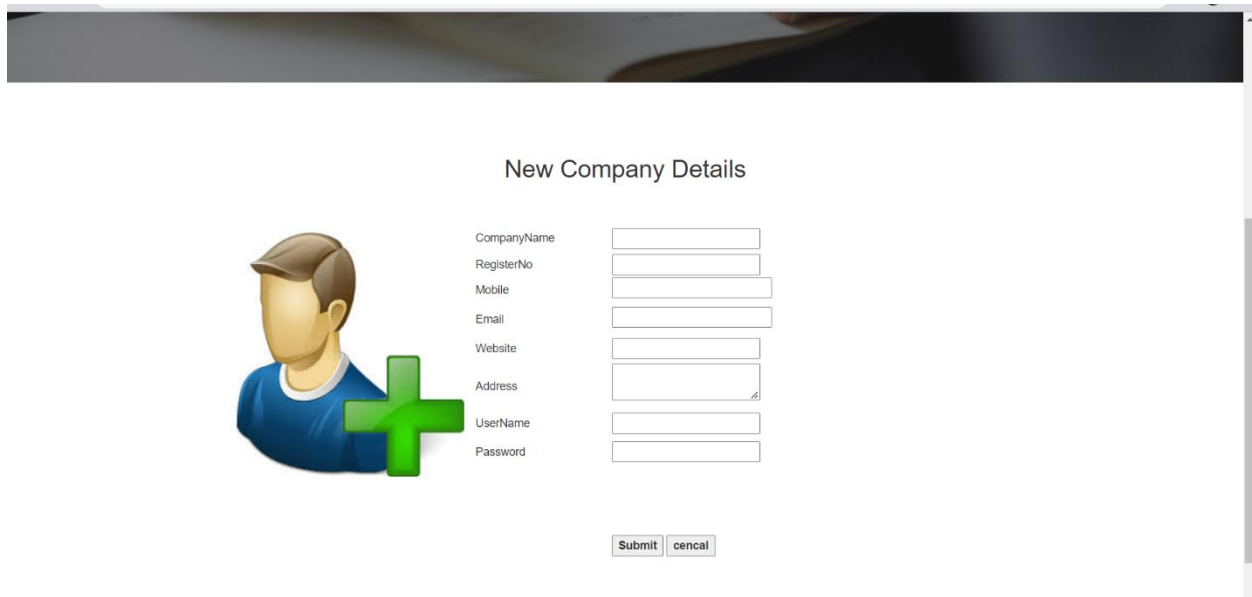

HOME :

NEW USER REGISTRATION :

The screenshot displays the 'New User Registration' form. On the left, there is a graphic of a person's head and shoulders with a large green plus sign overlaid. The form fields are arranged in two columns. The left column contains labels for 'Name', 'Gender', 'Age', 'Email', 'Phone', 'Address', 'Degree', 'Department', 'UserName', and 'Password'. The right column contains the corresponding input fields: a text box for Name, radio buttons for Gender (Male is selected), text boxes for Age, Email, and Phone, a text box for Address, dropdown menus for Degree and Department, and text boxes for UserName and Password. At the bottom right of the form are 'Submit' and 'cancel' buttons.

NEW COMPANY REGISTRATION :

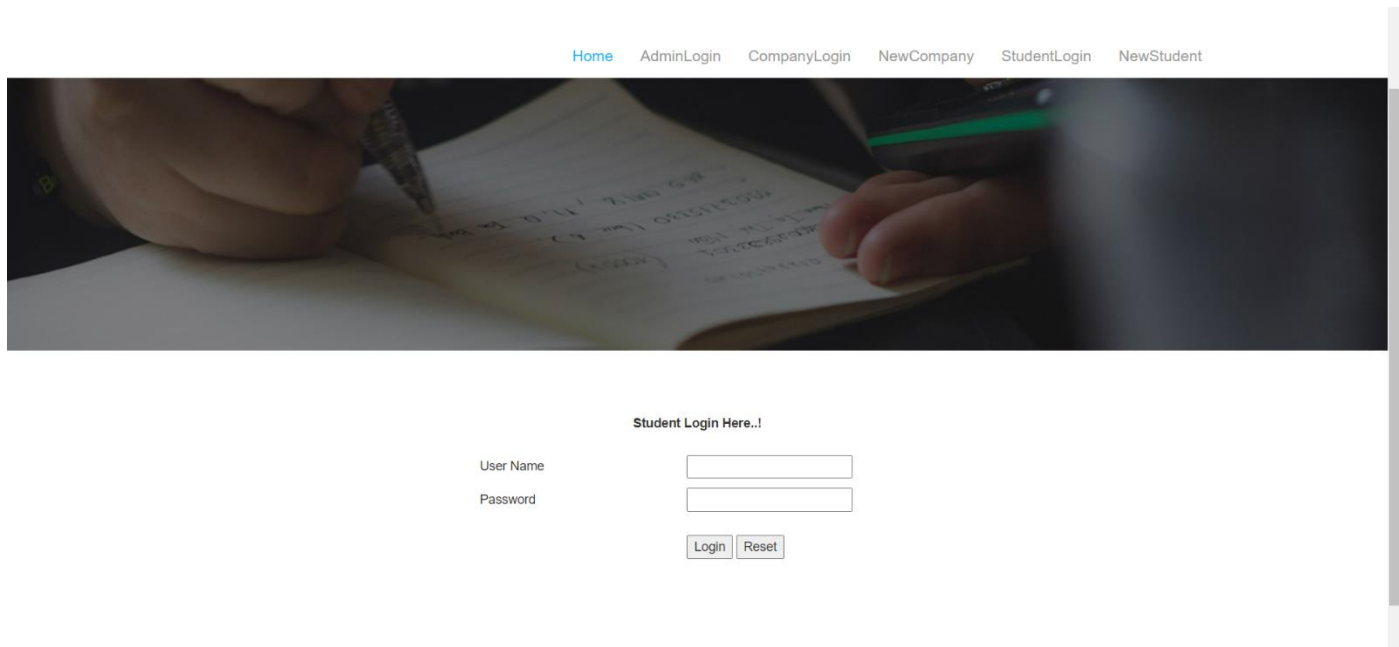

The form is titled "New Company Details". To the left of the input fields is an illustration of a person's head and shoulders in a blue shirt, with a large green plus sign overlaid on it. The form contains the following fields:

CompanyName	<input type="text"/>
RegisterNo	<input type="text"/>
Mobile	<input type="text"/>
Email	<input type="text"/>
Website	<input type="text"/>
Address	<input type="text"/>
UserName	<input type="text"/>
Password	<input type="text"/>

At the bottom of the form are two buttons: "Submit" and "cancel".

STUDENT LOGIN :

[Home](#) [AdminLogin](#) [CompanyLogin](#) [NewCompany](#) [StudentLogin](#) [NewStudent](#)

The form is titled "Student Login Here..!". It contains the following fields:

User Name	<input type="text"/>
Password	<input type="password"/>

At the bottom of the form are two buttons: "Login" and "Reset".

COMPANY LOGIN :

Company Login Here..!

User Name	<input type="text"/>
Password	<input type="password"/>
	<input type="button" value="Login"/> <input type="button" value="Reset"/>

ADMIN LOGIN :

[Home](#) [AdminLogin](#) [CompanyLogin](#) [NewCompany](#) [UserLogin](#) [NewUser](#)

Admin Login Here..!

User Name	<input type="text"/>
Password	<input type="password"/>
	<input type="button" value="Login"/> <input type="button" value="Reset"/>

CHAPTER 8

TESTING

8.1 USER ACCEPTANCE TESTING:

This is typically the last step before the product goes live or before the delivery of the product is accepted. This is performed after the product itself is thoroughly tested (i.e after system testing).

Defect Analysis

This report shows the number of resolved or closed bugs at each severity level and how they were resolved.

Table:8.1.1 Defect Analysis

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	15	4	2	3	25
Duplicate	1	1	3	1	6
External	2	3	0	1	6
Fixed	11	2	4	20	37
Not Reproduced	0	0	1	0	1
Skipped	0	0	1	1	2
Won't Fix	0	5	2	1	8
Totals	29	14	13	26	80

Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Table:8.1.2 Test case Analysis

Section	Total Cases	Not Tested	Fail	Pas s
Print Engine	7	0	1	7
Client Application	52	0	2	50
Security	2	0	2	2

Outsource Shipping	3	0	1	3
Exception Reporting	9	0	1	9
Final Report Output	4	0	1	4
Version Control	2	0	0	2

8.3 TESTCASES REPORT

5	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Comments	TC for Automation(Y/N)	BUG ID	Executed By
9	Home Page	Verify that categories of skills and jobs are shown in homepage		1. Open the website 2. Enter details and press login 3. Verify that categories of are showing jobs shown in homepage		Categories of skills and jobs should be shown in homepage	Working as expected	Pass	Excellent	N		Priyadharshini G
10	Home page	Verify that jobs are displayed in homepage		1. Open the website 2. Enter details and press login 3. Verify that jobs are displayed in homepage		jobs should be displayed in homepage	Working as expected	Pass	Good	N		Nivedha P
11	Home page	Verify that when clicked on jobs it is redirected to correct page		1. Open the website 2. Enter details and press login 3. Verify that when clicked on jobs it is redirected to correct page		When clicked on job link it should be redirected to correct page	Working as expected	Pass	Excellent	N		Aruna M
12	ChatBot	Verify that the chatbot is responding correctly		1. Open the website 2. Enter details and press login 3. Verify that categories of are showing jobs are displayed by the chatbot.		When typed on the chatbot it should respond relevant to the asked question.	Working as expected	Pass	Good	N		Sushmith Nisha K
13	Login page	Verify that admin can view all the details of both user and company		1. Open the website 2. Enter details and press login 3. Verify that all the data are visible to the admin		When logged as admin all the details of company and user should be visible to the admin.	Working as expected	Pass	Good	N		Priyadharshini G

Figure:8.3.1 Test cases Report

CHAPTER 9

RESULTS

9.1 PERFORMANCE METRICS:

The test cases described in the user acceptance and performance testing are passed and the page is responsive for the users to get the appropriate jobs that suit their skills. Content-based recommender systems (CBRs) in the context of JRS are models to construct a recommendation, only use a semantic similarity measure between the user profile and the set of available vacancies. I.e., the semantic similarity is used as a proxy for estimating the relevance of each vacancy to the job seeker.

All the components such as user login, admin login, company login, login info and home pages function excellently and shows errors when the login credentials don't match the database. The data is stored in the object storage provided by IBM cloud. Chat bot is created using IBM Watson Assistant to make it easier to interact with the application to get information regarding the job vacancies.

Thus the complete Cloud Application Development project for Skill and Job Recommender is created using Python, Flask and Docker is developed and the output is obtained successfully.

CHAPTER 10

ADVANTAGES AND DISADVANTAGES

ADVANTAGES:

Effectively communicates the job details, qualification and organization requirements. Highlights the company messages and creates awareness about their brands. It sends a positive feedback about the organization's fortunes to the marketplace. It can speed up the recruitment process and streamline administrative activities. Exact job requirement, qualification is informed.

DISADVANTAGES:

Most of the times, employers discourage their staff members to discussing about their company in social media. Sending too many candidates for the same job and sometime does not meet the employer requirements. Quite a large numbers of inappropriate applications, if care not taken while drafting the key job roles. An incorrect information or technical difficulties can turnoff desired applicants and damage reputation of the companies. Sometimes companies refuse to interview potential candidates because of their activities on social media sites.

CHAPTER 11

CONCLUSION

This system provides user a way to create profile in the platform within the system and get access to know about every other job opportunities posted by various companies on the platform related to his skill set also other skillsets and all other jobs. This job recommender system is designed and deployed in such a way that the user gets acknowledgements through mails using sendgrid. The companies are also to register into the platform and can post various job vacancies and offers in there company. When the job offer is posted the user who has skill set that was expected from the job offer was sent a mail regarding the post from any company. And the user can apply to the job offer recently is using me and sharing his profile with the company and the interaction and recruitment takes place between the company and the user. And a chat bot is provided to interact and guide the user through the system and by solving various queries. The admin has the privilege of monitoring both the activities of company and the user and has the axis two both profile.

These benefits may include improved model performance (temporal perspective), improved distribution of candidates over a set of homogeneous vacancies (reciprocal perspective), or ensuring algorithm fairness (ethical perspective). Currently, most attention goes out to how to represent the substantial amount of textual data from both candidate profiles and vacancies to create job recommendations, for which recently especially deep representations have shown promising results. However, this focus may also create the illusion that this is the only perspective that is relevant.

CHAPTER 12

FUTURE SCOPE

The job recommender system was designed in a manner that it can be able to let the user explore the platform and get benefited by finding jobs posted by many different countries according to his skillset. Though it achieves the problem statement in such a manner it has some future scopes and future improvements to be done. For now the user profile can be created and the user can view the job information and can get mails according to the relevant skill set about various jobs posted by different companies. A chatbot is provided in such a way to interact with the user and guide him throughout the system and a search feature is added to the system for the user to search for skill set or the company throughout the platform. And in the future enhancement, follow option can be added for the user to follow companies and get mails and alerts about any activity are post from that company and also adding filter option and expanding the functionalities of the system.
